Doleco's DoRa Gen 2 Ratchets 33 Percent Faster, While Offering Enhanced Safety Features for Maximum Versatility

Doleco's re-engineered DoRa Gen2 telescopic load binder provides speed and flexibility for flatbed operators and fleets, while preventing spindle overextension.

CHARLOTTE, N.C. (August 19, 2025) — [Doleco USA](http://www.doleco-usa.com), the nation's fastest-growing manufacturer of lifting sling and load-securing technologies, today announced the DoRa Gen 2 Ratcheting Load Binder, featuring significant engineering improvements that deliver 33 percent faster tensioning and de-tensioning, as well as enhanced, patent-pending safety mechanisms. The Gen 2 model maintains the original DoRa's patented telescopic design while adding critical operational improvements that make it a faster and most versatile manually-operated load binder.

Faster Than Before

The DoRa Gen 2's re-engineered thread pitch advancement enables operators to achieve four millimeters of spindle movement per 360-degree rotation instead of three, resulting in 33 percent faster tensioning and release times. This improvement significantly reduces the physical effort and time required for both initial load securing and periodic re-tensioning during transport.

"If you're going to invest in load binders for your securing needs, the DoRa Gen 2 delivers capabilities that no other manually-operated binder can match," said Ralph Abato, president and managing director of Doleco USA. "It performs all the functions of a standard load binder while offering our patented telescopic design that provides both the industry's most compact form factor and longest extension range."

A Patent-Pending Design that Makes it Safer

The DoRa Gen 2 incorporates advanced safety features including visual marking indicators and an unscrewing protection mechanism. As operators extend the internal spindle, visual markers alert them when approaching maximum extension, while the mechanical lock prevents complete spindle separation—eliminating the time-consuming and potentially hazardous situation of bent spindles, or having to reassemble separated components in the field.

"Drivers often over- or under-estimate a binders reach because they're unsure how far they can extend it," Abato explained. "Our patent-pending system provides peace of mind through clear visual indicators and mechanical protection, allowing operators to utilize the full extension range without risk of spindle overextension or potential deformation."

Unmatched Versatility for Heavy Equipment Transport

The DoRa Gen 2's unique value proposition lies in its exceptional range of applications. At 20 percent shorter than standard load binders when retracted, it fits into tight spaces where conventional binders cannot operate—particularly critical when securing heavy construction equipment where anchor points may be very close to cargo.

- MORE -

Despite its compact size, the DoRa Gen 2 extends to twice the length of standard load binders, virtually eliminating the need to disconnect and reattach chains during periodic re-tensioning. This capability is especially valuable for operators who must inspect and adjust load security after traveling 50 miles from the loading point and every 150 miles or three hours thereafter, as required by transportation regulations.

Engineered for Virtually Any Load Securement Challenges

The DoRa Gen 2 works seamlessly with both traditional steel chains and Doleco's innovative DoNova PowerLash Textile Lashing Chain, providing operators with maximum flexibility in their cargo securing applications. The binder meets all current industry standards while offering advantages unavailable in any other load binder on the market.

Competitively priced with standard load binders that lack its advanced features, the DoRa Gen 2 represents a practical upgrade for any flatbed operation. Whether securing construction equipment, industrial machinery or other heavy cargo, operators benefit from faster operation, enhanced safety and the flexibility to handle virtually any load-securing scenario.

Availability

Doleco USA products are available in the U.S., Canada and Mexico through the company's Master Distributor network, which includes over 6,000 distribution points. For information on sales and distribution of Doleco USA products, call +1 (203) 440-1940 or email sales@doleco-usa.com.

About Doleco USA

Incorporated in 2013, Doleco USA is the fastest-growing cargo securement, optimization and protection supplier in the United States. Doleco USA's success has come from offering a full line of quality products through its proven distribution channel of more than 6,000 distribution points. Doleco is a subsidiary of [Dolezych GmbH & Co. KG](#). Founded in 1935 in Dortmund, Germany, Dolezych is a leading manufacturer and supplier of lifting equipment, slings, ropes and load-securing technologies, including the DoNova PowerLash Textile Lashing Chain, PowerLift Textile Chain Sling, ProDeck Double-Decking System, DoRa Compact Load Binder and DoQuick Load Binder. Dolezych offers secure and reliable solutions for the lifting and transportation of goods — whether it's on-site in production plants, on construction sites or by transportation via road, rail, sea or air cargo. In addition to Doleco USA, Dolezych also has operations in Poland, China, Chile, Ukraine, Russia and Turkey, with more than 650 employees worldwide. Learn more at <http://www.doleco-usa.com>.
